330
HYBRID POWER

Peterbilt's Model 330 Hybrid Electric (HE) meets the needs of a wide variety of medium duty applications, and is ideal for lease, rental and all van body applications. The Model 330 HE is simple and cost-efficient to operate and is designed for serviceability, providing a virtually trouble-free lifespan. The Model 330 HE is available with a 26,000 pound GVW rating, and can also be configured for non-CDL operation with hydraulic brakes for a greater range of driver options. At the heart of this versatile Class 6 vehicle is a lightweight, all-aluminum cab and an ergonomic interior designed for comfort and productivity. The integration of the Eaton Hybrid Drive System and the 260-horsepower PACCAR PX-6 engine delivers up to 860 ft-lbs of torque. Launching the vehicle electrically in an urban driving cycle can easily achieve fuel economy benefits in excess of 30%. The exceptional maneuverability, visibility and ease of operation make Peterbilt's Model 330 HE a versatile, environmentally friendly and profitable performer in urban and congested areas.
