

WHAT THEY'RE SAYING ABOUT E-DOCK...

"Drivers love it! It's easy to install and it's easy to put in the window. It heats or cools the cab in minutes."

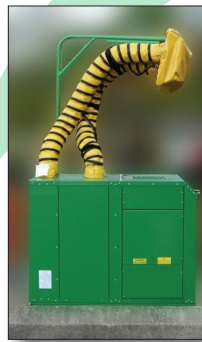

– Anne Forgo, Manager,
Plaza 23 Truck Stop, Albany, NY

Reducing Cost of Idling

"We've been looking ... for a long time, but we didn't really like what was out there," said Lou Polsinello, owner of Polsinello Fuels in Rensselaer, [who operates the Canaan, NY Truck Stop where five EnviroDock units will be installed.] "We think this one will fill the bill."

"...NYSERDA experts say EnviroDock's units have characteristics that should make them ... catch on here."

– Excerpt from the Albany, NY
Times Union, Oct. 15, 2008

WHO CAN BENEFIT FROM THE E-DOCK SYSTEM?

- Truck stop owners
- Truck drivers
- Federal & state highway agencies
- Distribution centers
- Airports
- Race tracks
- Limousines, ambulances & shuttle vans
- Anywhere idling is a problem!

About EnviroDock, Inc.

In an effort to reduce noise, air pollution and fuel costs, EnviroDock Inc., headquartered in White Plains, NY, was formed to produce an affordable, stand-alone heating, air conditioning and shore power system to the transportation industry. The system can be installed at truck stops, distribution centers and rest areas to allow

drivers to comply with current and future anti-idling legislation requirements. Installation of the E-Dock system will allow truck stop owners, fleet owners, and state and highway authorities to provide idling alternatives at their parking areas in compliance with recently-introduced anti-idling legislation. Use of the system will greatly diminish both air and noise pollution and increase fuel conservation, and will therefore have beneficial effects not only for the environment, but also for drivers, truck stop owners and neighborhood residents.

WHY SHOULD YOU BUY AN E-DOCK?

Anti-Idling Regulations Will Force Drivers to Seek Out Idling Alternatives

Recent introduction of mandatory state and municipal laws and ordinances in 38 states prohibits truck drivers and other classes of vehicular transportation from idling their engines while stationary for longer than five minutes.

Fines are being levied for violators of these laws, and these fines can start at \$350 for individual drivers and can go up as high as tens of thousands of dollars for large fleet owning companies.

This new legislation reflects changing societal attitudes toward environmental and noise pollution, and as enforcement increases, drivers will soon look for parking areas that provide them idling alternatives.

Drivers and Fleet Owners Can Save Money

A typical idling truck burns a gallon of fuel per hour. Running engines at lower speeds causes more wear and tear on the engine, shortening its life and increasing maintenance an average of \$2,000 per year. With the average truck idling 1,830 hours per year, a truck driver can spend well over \$6,600 a year through wasted fuel and engine wear by idling his/her engine. This figure will only grow as the average price of diesel rises above \$2.50 a gallon.

New Revenue Stream

At EnviroDock® we believe that your parking lot is one of the most underperforming assets that a site owner possesses. We believe that by purchasing an E-Dock unit or units, a site owner will open up a whole new revenue stream that was previously not adding to your bottom line. Now, an owner has the opportunity to add profits by providing a service that drivers need and want!

The Most Efficient and User Friendly System on the Market!

The E-Dock system has the best heating and cooling system in the industry which allows your drivers to cool or heat their cab in minutes. Also, the easy to use controls for temperature and air delivery combined with a rotating arm for weightless installation make the E-Dock system the most efficient and user friendly system in the marketplace today!

Start Small or Start Big

There are no minimum quantities to order and no minimum parking space requirements. Whether you want to start with one unit or one hundred units, at EnviroDock we give you the flexibility to order what you want, when you want. We give the site owner the ability to grow at their own comfort level.

Amazing Marketing Tool

By choosing to install the EnviroDock system, you will be able to draw more drivers into your travel center by providing them the unique comforts of home at a self-determined and affordable price of your choosing.

Not only can you generate revenues from the E-Dock system, but the increase in truck volume will translate into an increase in other areas of your business as well such as fuel, convenience store and restaurant sales.

Activation and Payment Flexibility

Our unique payment and activation system allows the site owner to choose how he or she would like their drivers to pay for their services. Whether it's a central payment kiosk, pay at the unit, or pay inside at the cashier, EnviroDock gives the owner the option on how they want to activate the E-Dock unit.

THE E-DOCK SYSTEM

Different parking environments call for different solutions, and that is why EnviroDock® has created two different systems. The E-Dock Stationary is for locations with fixed parking, and the E-Dock Portable is for areas with a more fluid parking situation.

E-Dock Stationary

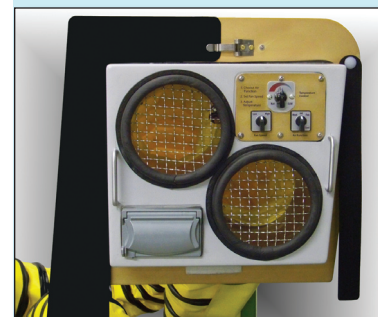

- Robust, steel-enclosed, powder coated unit
- Delivers electronically filtered temperate air through two thermally insulated flexible ducts into the truck cab via a patent pending, proprietary window control panel called the Window Air Delivery Unit (WADU)
- Swinging support arm used for easy and effortless installation of WADU
- Additional duplex 110V/15 amp power supply located on the unit itself for engine block heaters.
- Each unit is mounted on a two foot concrete pedestal which allows it to get out of the way of the weather elements and in line with the cab window
- 115V/60amp (or 115V/100 amp) conduit is run to each

E-Dock Portable

- Constructed with a reinforced steel cabinet set on four 8" steel casters for maneuverability
- Steel pole is mounted into the unit that will allow the driver to easily install the Window Air Delivery Unit (WADU) into the window as well as hang the ducts and WADU before and after use.
- Available through our WADU, one 120V/15 amp power as well as individual temperature and fan controls.
- Duplex 110V/15 amp power supply located on the unit itself.

WINDOW AIR DELIVERY UNIT (WADU)

Challenges

With over 75 truck models with over 25 different window sizes and configurations EnviroDock was faced with a daunting challenge of providing an easy to use window integration piece

EnviroDock developed a system involving one primary component and five attachments. Each attachment fits several types of windows by adjusting the interlocking pieces.

WADU was designed for truck drivers by truck drivers.

Features:

- One 120V/15amp duplex power outlet for in-cab appliances
- Has two 6" duct for supply and return air, separated to provide maximum in cab circulation
- Three switches to adjust temperature, fan speed and to switch between on/off, heat or a/c.
- Optional Cat 5 internet connection can be added as well.
