

The Orion Security Location Application

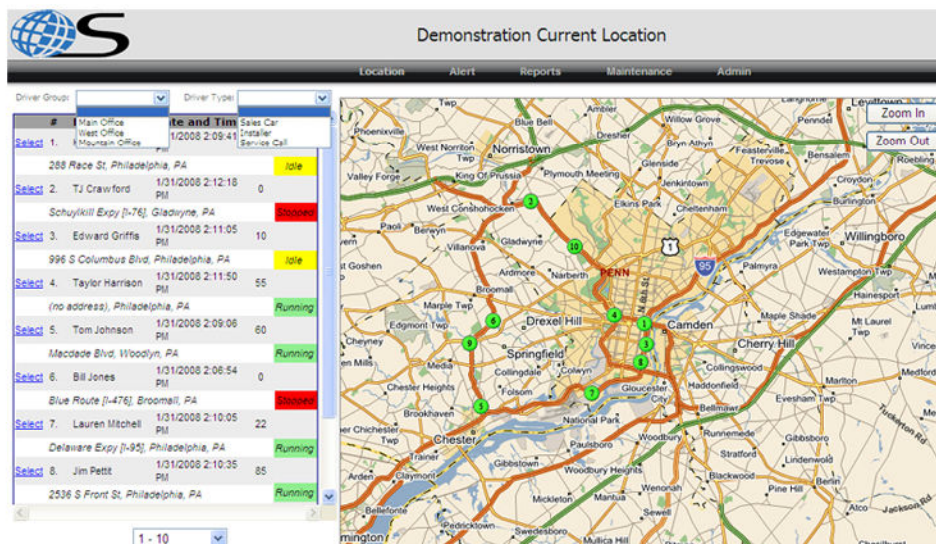

Introducing a highly intuitive yet powerful web based location application....

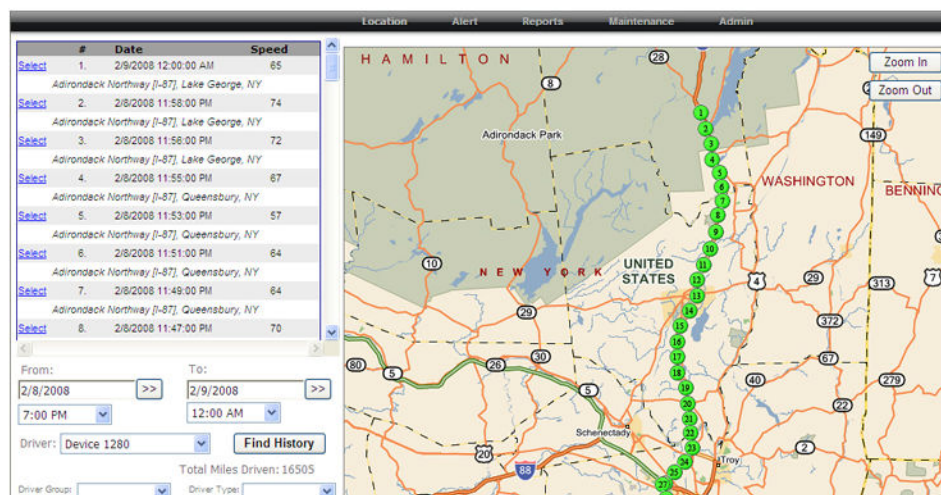

Overview: The Orion Security Online Location Application was developed to be extremely user friendly without sacrificing the features and performance required by fleet managers today. Through a variety of real-time and historical location displays, managers maintain complete information regarding the status of all fleet vehicles. As well, through real time alerts, tax reporting, and automated maintenance management, fleet managers have the tools necessary to efficiently manage their workforce with minimal back office effort. Most significantly, the intuitive and adaptable interface of the Orion Online Location Application allows our services to be deployed into your existing fleet operations with minimal effort.

Current Location: View the instantaneous status of your entire fleet, with map location, street address, speed information, satellite imagery, and idle, stopped, or running notification. (shown right)

Highly Intuitive Web Based Interface: Designed to resemble a 2.0 website rather than a database system, the Orion Online Location Application requires minimal upfront learning. Through a system of standardized menus, all pages are no more than one click away. Although we do offer training for the application, most customers decline this offer, as they find the interface self explanatory. Also, since the application is web based, there is no software to download or install, and all fleet location information is securely accessible through any internet computer.

Large Fleet Management: The Orion Online Location Application allows users to differentiate vehicles by both division and vehicle type. On any application page, simply select the division, vehicle type, or both to retrieve the desired fleet location information. For large fleets, this means that there are no complicated menus or long lists to search through, and within seconds you have the information that you need.

Location History: View the history of every location that a vehicle has traveled, over any given time frame. You can view the location history in map form, street address, or satellite imagery. As well, speeding and mileage data is displayed. Historical data is stored for ninety days. (shown left)

The Orion Security Location Application

"Extreme rains in San Jose California recently closed many roads, stranded motorists, and damaged homes. For our operations as a roofing company in San Jose, this is a difficult logistical situation at a time when roofing repair services are desperately needed. Through the Orion Location Application, our fleet manager was able to stay connected with the fleet and route vehicles accordingly. " - Action Roofing

Proximity Search: Suppose a customer need arises in the middle of a busy day, but you do not know who is best suited to handle the call. Simply input the address of the customer into the proximity search page, and the Orion Online Location Application will return the nearest vehicles. The application can even filter out vehicles based upon current status, vehicle type, or division. Thus, if there is an emergency, the dispatcher can easily route the nearest technician, not the nearest sales person.

The screenshot shows the Orion Online Location Application interface. On the left is a search form with fields for Driver Group, Address (307 Caliremont Road), City (Villanova), State (Pa), Zip Code (19085), Search Miles (5.9), and checkboxes for Move, Idle, and Stop. Below the form is a table of results. On the right is a map of the Villanova area with a red location marker.

#	Driver	Distance	Date and Time	Spd
Select 9.	TJ Crawford	3.42	1/31/2008 2:12:18 PM	0
	Schuylkill Expy [I-76], Gladwyne, PA			Stopped
Select 10.	Bill Vorse	5.88	1/31/2008 2:12:40 PM	0
	Schuylkill Expy [I-76], Bala Cynwyd, PA			Stopped

Real Time Alerts: It is often difficult for managers to continuously monitor the locations and actions of all fleet vehicles. Thus, you can set the Orion Online Location Application to automatically alert you if a vehicle travels too fast, travels too long, is stopped too long, remains idling too long, or travels into or out of a predetermined area. Notifications can be sent to various individuals via email or cellular text messaging.

Reports: The Orion Online Location Application allows managers to instantaneously generate reports based upon past fleet activity. Reports can be based upon speeding, driving time, stopped time, idling time, and zone activity. As well, the application can provide daily time sheets and mileage based tax reports, all exportable to excel and pdf formats. If our offering of reports does not meet your needs, simply ask and we can create custom reporting features. Overall, the Orion Online Location Application saves your back office time and money by automating your reporting needs.

The screenshot shows a "Speeding Report" from the Orion Online Location Application. It is displayed in a Microsoft Internet Explorer window. The report lists 11 drivers with their speed, time, and address.

#	Driver	Speed	Time	Address
1	Jim Pettit	85	01/31/08 02:10 PM	2536 S Front St, Philadelphia, PA
2	Kelly Condon	66	01/30/08 11:05 PM	Blue Route [I-476], Villanova, PA
3	Kelly Condon	69	01/30/08 11:03 PM	Blue Route [I-476], Broomall, PA
4	Kelly Condon	74	01/30/08 11:01 PM	Blue Route [I-476], Broomall, PA
5	Kelly Condon	66	01/30/08 10:59 PM	Blue Route [I-476], Springfield, PA
6	Kelly Condon	70	01/30/08 10:51 PM	I-95, Essington, PA
7	Kelly Condon	71	01/30/08 10:49 PM	Delaware Expy [I-95], Philadelphia, PA
8	Kelly Condon	67	01/30/08 10:47 PM	Delaware Expy [I-95], Philadelphia, PA
9	Kelly Condon	65	01/30/08 10:45 PM	Delaware Expy [I-95], Philadelphia, PA
10	Kelly Condon	70	01/30/08 10:21 PM	Schuylkill Expy [I-76], Philadelphia, PA
11	Kelly Condon	66	01/30/08 10:19 PM	Schuylkill Expy [I-76], Bala Cynwyd, PA

Vehicle Maintenance Management: All fleet vehicles require routine maintenance to remain operational, the Orion Online Location Application helps fleet managers keep track of maintenance needs. Simply establish a maintenance routine for each vehicle, or apply a single maintenance event to your entire fleet. Once the preset mileage threshold is reached by a vehicle, you will automatically receive email or text notification that maintenance is required. Your back office staff no longer needs to keep manually checking vehicle odometers to keep up with vehicle maintenance needs.

The Orion Security Location Application

"Although we require that all vehicles be turned off when they are not moving, our drivers often leave the trucks running even when stopped. This wastes a lot of fuel across our fleet. Now with the Orion Online Location Application, we can monitor idling time, routes, and speeding history to increase fuel efficiency and save money."
- UGI Utilities

Administrative Features: Through the administrative tool set, Orion customers are able to create and edit users for the Orion Online Location Application. However, a fleet manager may want to prevent certain application features from being accessed by a particular user. Thus, in creating new login credentials, a username can be restricted to only access specific features. For instance, a fleet manager could maintain full access to the application while a dispatcher is only permitted to view the location pages.
