The patented ICOM JTG Propane System is innovative and has these advantages:

- The automotive propane injectors inject liquid propane (not vapor) into the vehicles intake manifold.
- The ICOM JTG System does not use emulation or electronic maps which eliminates the need for computer mapping (no laptop).
- The original vehicle PCM commands and controls the ICOM propane system in every situation utilizing the original vehicle strategies.
- The ICOM JTG propane system is currently used on over 100,000 vehicles worldwide including over 5,000 in the United States.
- ICOM is targeting popular fleet engines for Bifuel EPA and CARB Certifications

JTG Liquid Propane Injection System utilizes a different approach to Automotive Liquid Propane

More Power

More Torque

Improved Efficiency

Improved Reliability

Lower Emissions
